Fuzzy context (scaled to 0–1)
Train 60%
Calibration 20%
Test 20%
Pseudo-concepts (class means), fitted on train
Predictor (forest, logistic or network), fitted on train
Can the prediction be trusted?
Scores per class: distance, membership or probability
Threshold from calibration scores (one or per class)
Answer set Γ(x) contains the true class with chance ≥ 1 − α
Can the explanation be trusted?
Explanation: nearest pseudo-concept
Decision of the predictor
Fidelity: decision level and attribute level
Trust gate: conformal, confidence or fuzziness
